

**Yegor Voronin**  
**Sr. Science Officer**

Yegor Voronin, Ph.D., joined the Global HIV Vaccine Enterprise in 2010. As a Senior Science Officer, he oversees the *Timely Topics in HIV Vaccines* initiative, a program that brings experts together to identify the most pressing strategic needs and questions in the field and to address them via a variety of projects, such as workshops, webinars, consensus documents, and educational materials.

Dr. Voronin holds Bachelor's Degree in Molecular Biology from Novosibirsk State University, Russia. Since coming to the United States, he has spent nearly 20 years in HIV research, studying the molecular details of the reverse transcription process in Dr. Vinay Pathak's laboratory at the National Cancer Institute in Frederick, MD and then population genetics and mechanisms of HIV evolution with Drs. Michael Emerman and Julie Overbaugh at the Fred Hutchinson Cancer Research Center in Seattle, WA.
